

# **GOVERNMENT SERVICES FOR WOMEN**

## **INTERNSHIP REPORT**

*Submitted by*

**HARIHARAN K**

**AC20UCS037**

Under Supervision of  
Mr. Amarnath B, Senior Developer  
Intarm Technologies, Domlur  
Bengaluru,  
Karnataka 560071

(Duration: 15-05-2023 To 12-06-2023)

*in partial fulfillment of the requirements for the award of degree of*

**BACHELOR OF ENGINEERING**  
**IN**  
**COMPUTER SCIENCE AND ENGINEERING**

**ADHIYAMAAN COLLEGE OF ENGINEERING**  
**(AUTONOMOUS)**

**HOSUR – 635 130, TAMIL NADU**

**JUNE - 2023**

**ADHIYAMAAN COLLEGE OF ENGINEERING**  
**(Autonomous)**

**DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING**

This is to certify that the “**Internship report**” on **Government Services For Women** submitted by **Hariharan K (AC20UCS037)** during 2022-2023 academic year at **Intarm Technologies, Domlur, Bengaluru.**

Department Internship Coordinator

Head of the Department

Date: 12 June, 2023

**TO WHOM IT MAY CONCERN**

This is to certify that **Mr. Hariharan K**, BE Computer Science., student has done his internship in Web Technology at Intarm Technologies, Bangalore from 15<sup>th</sup> May 2023 to 12<sup>th</sup> June 2023, under guidance of Mr. Amarnath B, Senior Developer.

During the period of his internship program with us, he had been exposed to different processes and found diligent, hardworking and inquisitive. His performance exceeded expectation and was able to complete the project successfully.

We wish him all the best for his future endeavors.

For INTARM Technologies,

Authorized Signature

## ACKNOWLEDGEMENT

We thank the almighty for granting me the wisdom, strength and grace to complete this project and for being with me in every step that we took in order to complete the project successfully.

With honor we place my sincere thanks and gratitude to **Dr. G. RANGANATH, M.E., Ph.D.**, Principal, Adhiyamaan College of Engineering (Autonomous), Hour, for this valuable opportunity given to us.

We are thankful to **Dr. G. FATHIMA, M.E., Ph.D.**, Head of the Department, Department of Computer Science and Engineering, Adhiyamaan College of Engineering, for her most valuable guidance, advice and encouragement in all stages of our project.

We would like to extend our gratitude to **Mrs .V. KALAI VANI, M.E., (Ph.D).**, Assistant Professor, Department of Computer Science and Engineering, Adhiyamaan College of Engineering, for his continuous guidance and suggestions throughout the project.

Last but not the least, I would like to thank my family, friends and well-wishers who have assisted us directly or indirectly in the completion of my project.

## ABSTRACT

**“GOVERNMENT SERVICES FOR WOMEN”** is developed to manage the Schemes arising to government. Women are the most vulnerable group in major parts of India. India's North Eastern region is quite backward comparing to other parts of the country and the condition of women is also not so good. Adolescence is a stage when a girl sees a number of changes in her physical and mental health. In this stage she needs proper nutrition for her all-round growth. But in our country especially in this part of the country the girls face lot of obstacles including mal nutrition due to which she lacks proper growth of her body and mind.

The Government of India thus introduced a number of schemes for the welfare of the people and more specifically for the women and girls. If the users can need the schemes the admin can add the schemes to user and the user also apply particular schemes to government. If there are any issues in applying schemes the users can contact with the admin (Government) peoples. But the schemes also do not reach to the appropriate group of people because of lack of awareness and corruption along with a number of other reasons. In this Application a modest attempt has been made to analyse the causes of poor performance of the Govt. schemes on the basis of available data collected from different sources and Govt. data and produces a comparative chart of the implementation of the Govt. schemes in the eight North Eastern states of India.

This project is very useful to manage all the schemes. Everyone can easily send their schemes Application easily with the help of this system. If any doubts, they can easily send the schemes through this system. This project is developed by the font end PHP and back end MYSQL.

# **1. INTRODUCTION**

## **1.1 Overview**

This project “Government Services for women” Users can check online the schemes and programmes available for women empowerment. This online service is proved by the National Mission for Empowerment of Women, Ministry of Women and Child Development. You can select the criterion to find scheme/programme available for you

The Government of India thus introduced a number of schemes for the welfare of the people and more specifically for the women and girls. By using this application, the users can easily know about what the scheme is referring, they can register through online and submit the needed data for particular schemes. This application will be automatically updated to the particular user through their recommended contact details. The educational girls can use this process for their scholarship bases. Admin will be also notified immediately if the users has been registered for applying the required scheme. Users can get the particular representative contact details, so that if any clarification they can contact directly.

This project is very useful to manage all the schemes. Everyone can easily send their schemes Application easily with the help of this system. If any doubts, they can easily send the schemes through this system.

## **1.2 About the Organization**

Intarm Technology uses the right technology for developing your web/mobile applications and 3d interactive animations to take your business to the next level. Let Us Help You Succeed in Your Digital Business.

Get a website design digital marketing campaign, consult solutions for complete solutions for your digital business. By focusing on the style to match your business. and help increase better opportunities for your business Whether in the form of a company, agency, organization or individual who want to have a website to publicize, advertise or open the market to increase your business opportunities You need to have a website and a marketing plan that is designed to best match your business or service. In order to help your business, achieve the objectives and goals you set.

### 1.3 Problem Statement

Central and State Government of India are providing many beneficial Schemes to Women in real world. Women like Degree holder, Married helpful by the government schemes. But, most of them are not knowledge about those schemes' because information not reaching them to manage all the schemes. Application easily with the help of this system. If any doubts, they can easily send the schemes through this system.

They are less well-nourished than men, less healthy, more vulnerable to physical violence and social abuse. They do not get adequate opportunities for education and career development. They face lot of obstacles in work place, and to participate in political life effectively. All policies relating to the development of women must reach up to the grass root level. The gender discrimination can be reduced if each girl receives the benefit of KSY. It is a common factor that in our country many Govt. schemes do not reach to the needy people due to large scale corruption. This project is developed by the front end PHP and back end MYSQL.

### 1.4 Objective

#### ADMIN

- Login page is used for secured of the product, the authorized user can only log into system. The fields are
  - Username-Name of the user logging into system
  - Password-password used for logging into system

First Admin has to register to the portal by giving his name, address, phone number etc. After registration he can log in to the portal by providing his username and password. User can view list of available furniture with the proper description and cost.

- In this Module, Admin can add various kinds of schemes. This can be maintaining admin only.

#### USERS

- Login page is used for secured of the product, the authorized user can only log into system. The fields are
  - Username-Name of the user logging into system
  - Password-password used for logging into system

First User has to register to the portal by giving his name, address, phone number etc. After registration he can log in to the portal by providing his username and password. User can view list of available furniture with the proper description and cost. User can search the furniture based on different categories.

## **2. SYSTEM ANALYSIS**

Any woman working or visiting any office of Central Government (Central Ministries, Departments, Public Sector Undertakings, Autonomous Bodies and Institutions, etc.) can file complaint related to workplace sexual harassment through this SHe-Box. The Mother and Child Tracking System, launched in 2009, helps monitor the health care system to ensure that all mothers and their children have access to a range of services, including pregnancy care, medical care during delivery, and immunizations. The system consists of a database of all pregnancies registered at health care facilities and birth since 1 December 2009..

Indira Gandhi Matritva Sahyog Yojana (IGMSY), Conditional Maternity Benefit (CMB) is a scheme sponsored by the national government for pregnant and lactating women age 19 and over for their first two live births. The programme, which began in October 2010, provides money to help ensure the good health and nutrition of the recipients. For most The Rajiv Gandhi Scheme for Empowerment of Adolescent Girls – Sabla is an initiative launched in 2012 that targets adolescent girls. The scheme offers a package of benefits to at-risk girls between the ages of 10 and 19. It is being offered initially as a pilot programme in 200 districts. The programme offers a variety of services to help young women become self-reliant, including nutritional supplementation and education, health education and services, and life skills and vocational training. Rashtriya Mahila Kosh (The National Credit Fund for Women) was created by the Government of India in 1993. Its purpose is to provide lower income women with access to loans to begin small businesses. Priyadarshini, initiated in April 2011, is a programme that offers women in seven districts access to self-help groups. Under Pradhan Mantri Matru Vandana Yojana Rupees 5000 are given to eligible beneficiaries directly in the account of eligible beneficiaries through pIUWV CAS portal, It is accessible to functionaries at Block, District, State and National level for implementation and monitoring of the Pradhan Mantri Matru Vandana Yojana (PMMVy). At Block level, digitization/approval of the data of eligible beneficiaries under PMMVy received from Anganwadi Centers/Approved Health Facilities is done for making payment to the beneficiaries, bank/post office account by Nodal Officer at State level.

### **2.1 Existing system**

Existing system is based on getting the scheme formats through manual bases, every user must go for particular places where the scheme runs, and then fill the required application for further procedures manually.

## **DISADVANTAGES**

Waiting process is much, the format is too high, people who are uneducated suffers more to fill the required application, many needed proofs are missing.

## **2.2 Proposed system**

This article examines how much women know about government services and benefits and discusses why this type of knowledge matters. Using data from a survey as well as focus groups conducted in Montreal and Toronto, we show that the women who are most likely to need information about these programs are often the least likely to be aware of them. This is especially true of low-income women, older women, and women who came as immigrants. We end by suggesting some steps that could be taken to address these knowledge gaps. they can view need information through the particular scheme.

## **ADVANTAGES**

- Easy to apply the scheme, no need to wait for the response as the application is filled correctly
- User contains representative contact details
- This is simple and efficient.
- Regularly update and maintain the website to ensure accurate information, fix issues, and keep up with changing user needs and technological advancements.

Remember, this is a high-level overview, and the specific features and functionalities of your system may vary based on the context, government policies, and available resources.

### **3. METHODOLOGIES**

A methodology is a collection of methods, practices, processes, techniques, procedures, and rules. In project management, methodologies are specific and strict and usually contain a series of steps and activities for each phase of the project's life cycle. They have defined approaches showing us precisely what steps to take next, the motivation behind each step, and how a project stage should be performed.

In the case of project management, a framework is an overview of how its guidelines should be implemented. While methodologies offer strict principles and practices for completing a project, frameworks are more flexible because they can adapt to changing situations or a company's needs, leaving room for the person in charge to find the best way to complete a project. You can also bring new existing methods or practices to the framework you're working with.

#### **TESTING METHODOLOGIES**

Two classes of inputs are provided to the test process:

- A software configuration that includes a software requirement specification design specification and code.
- A test configuration that includes a test plan and procedure, any testing tools that are to be used and test cases and their expected results.
- A test configuration that includes a test plan and procedure, any testing tools that are to be used and test cases and their expected results.
- A test configuration that includes a test plan and procedure, any testing tools that are to be used and test cases and their expected results.
- The objective of the testing is to identify the errors. The various modules contained in the system were tested individually. All the items of various modules were checked for their validity, for their format if the user and other data restrictions specified any specific format.
- The screen was tested for user acceptance, satisfaction and understanding.

The following are the Testing Methodologies

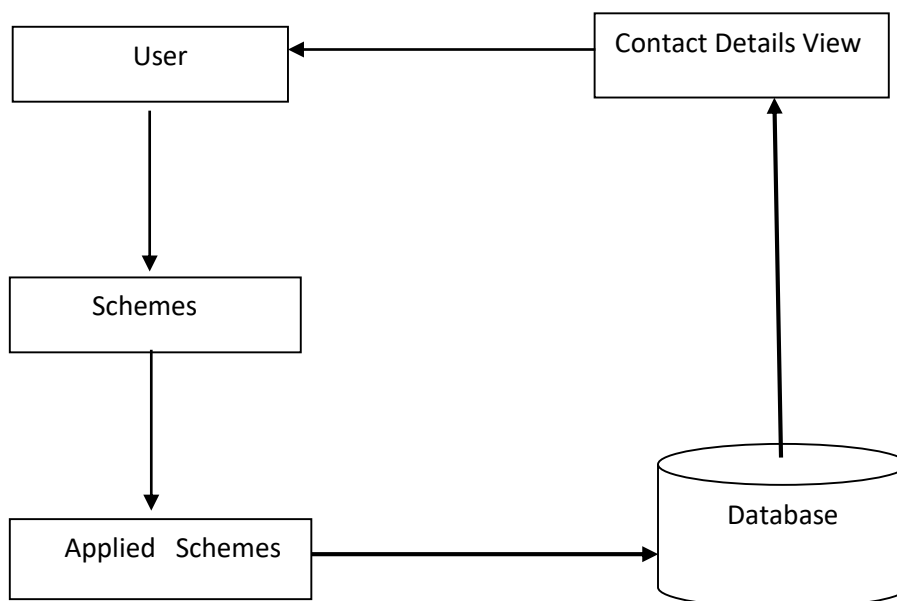

- Unit Testing
- Validation Testing
- Output Testing

- Testing can't show the absence of defects; it can only show that software defects are present. If testing is conducted successfully, it will uncover errors in the software.
- Testing demonstrates that the software functions appear to be working according to specification.

## 3.1 Architectural Diagram

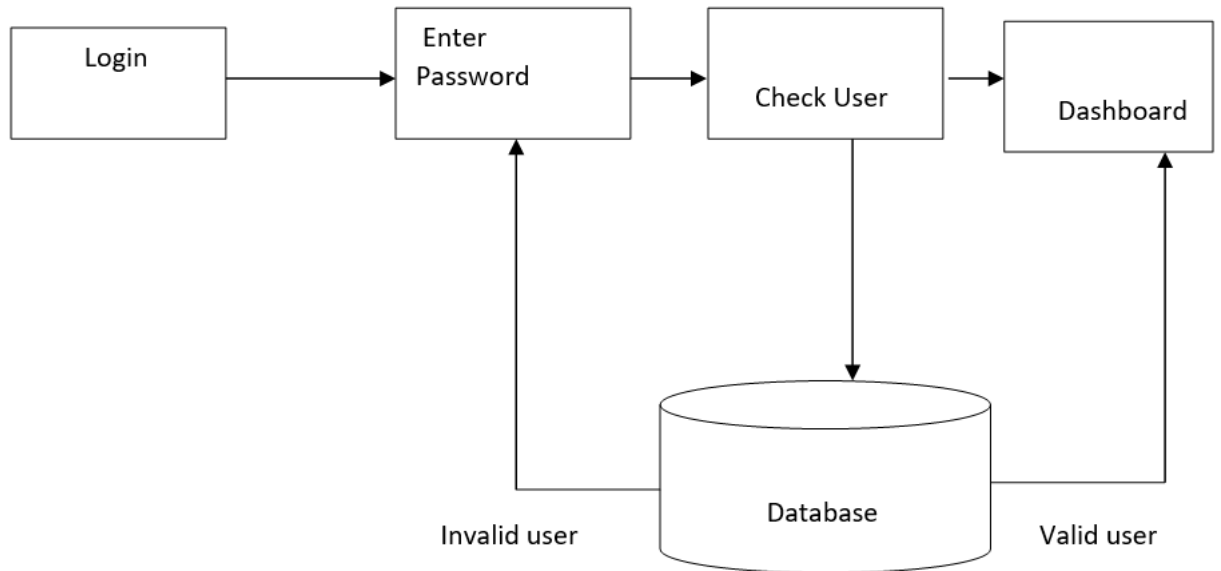

### 3.1.1 System Architecture

Systems design is the process of defining the architecture, modules, interfaces, and data for a system to satisfy specified requirements. Systems design could be seen as the application of systems theory to product development. There is some overlap with the disciplines of systems analysis, systems architecture and systems engineering.

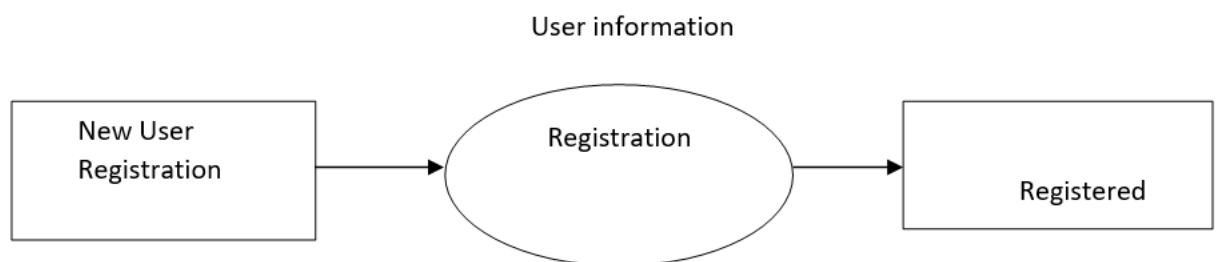

**Architecture Diagram**

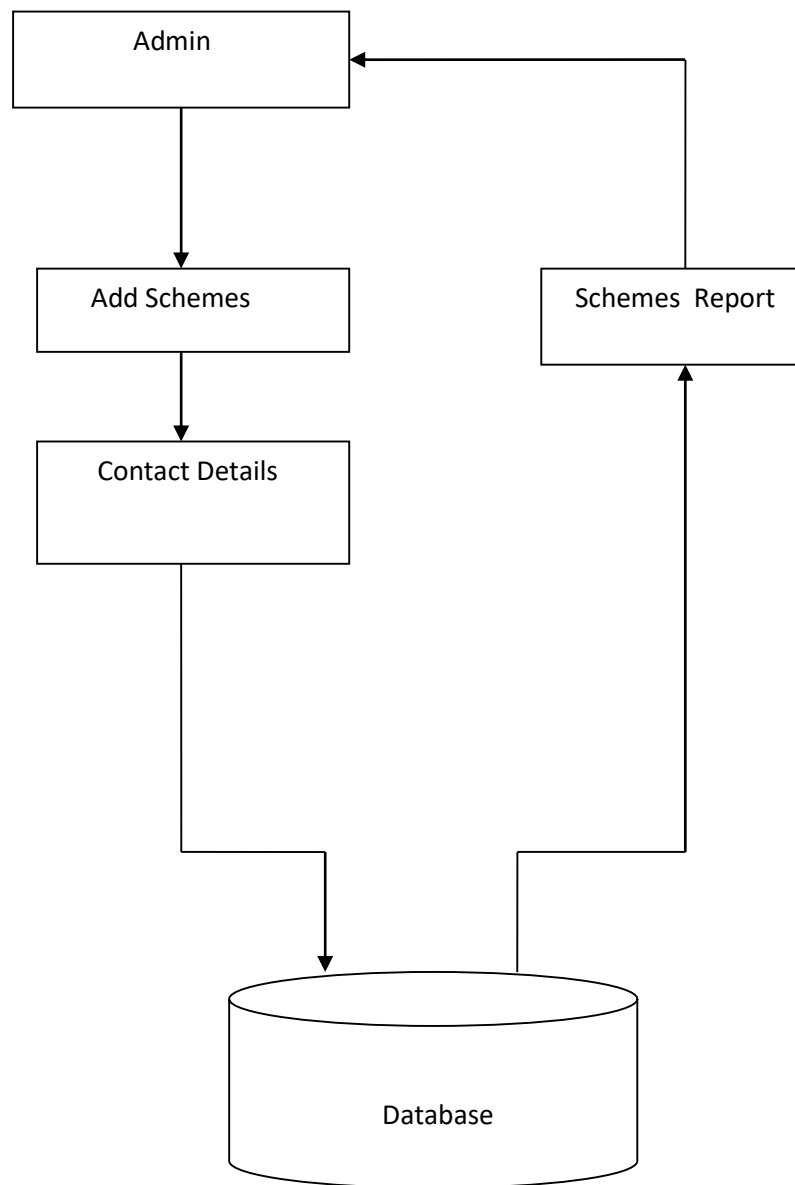

### 3.1.3 User Login

### 3.1.4 User Registration

### 3.1.5 Admin Architecture

## **3.2 Modules**

### **ADMIN**

- Login
- Add schemes
- Schemes Report
- Contact details

### **USER**

- Login
- Registration
- Schemes
- Apply schemes
- Contact detail's view

### **Basic Flow:**

- User can search the furniture based on different categories. Also user can search the furniture by giving the price range and category, and system will display all the products of that particular category come under the price given by user.
- User can select and book his desire product by paying the amount by debit/credit card or he can opt for COD option. Admin is responsible to deliver the product to his address.
- By viewing the particular scheme, user can apply through this scheme option, the schemes will be differentiated through particular list.
- If users have any queries along the scheme, they can directly contact the representative.
- Admin can add the details of user contact.
- After Applying to schemes, it can be viewing the particular details, and Admin can provide approval.

## **4. TECHNOLOGY USED**

### **Software Requirements:**

- PHP 5.0
- APACHE HTTP Server Dreamweaver, FrontPage for Front End Programming
- Microsoft Windows.
- Front End: HTML, Css
- Web designing language: PHP
- RDBMS (Back end): MySQL

### **Hardware Requirements:**

- Intel Pentium IV processor or equivalent or higher
- 512 MB Ram or Higher
- 20 GB HDD or Higher
- Network Connectivity

The technology selected for implementing Student Information Management System is PHP/MYSQL. Apache is used as the HTTP server. The development was done in a 'windows' environment using adobe Dreamweaver CS5. PHP is a general-purpose scripting language that is especially suited to serverside web development where PHP generally runs on a web server.

### **PHP**

PHP code is embedded into the HTML source document. Any PHP code in a requested file is executed by the PHP runtime, usually to create dynamic web page content. It can also be used for command-line scripting and client-side GUI applications. PHP can be deployed on many web servers and operating systems, and can be used with many relational database management systems (RDBMS). It is available free of charge, and the PHP Group provides the complete source code for users to build, customize and extend for their own use.

## **MySQL**

MySQL is a relational database management system (RDBMS)[1] that runs as a server providing multi-user access to a number of databases. MySQL is a popular choice of database for use in web applications and is an open-source product. The process of setting up a MySQL database varies from host to host, however we will end up with a database name, a user name and a password. Before using our database, we must create a table. A table is a section of the database for storing related information. In a table we will set up the different fields which will be used in that table. Creating a table in phpMyAdmin is simple, we just type the name, select the number of fields and click the 'go' button. we will then be taken to a setup screen where you must create the fields for the database. Another way of creating databases and tables in phpMyAdmin is by executing simple SQL statements.

We have used this method in order to create our database and tables. Apache The Apache HTTP Server is a web server software notable for playing a key role in the initial growth of the World Wide Web. In 2009 it became the first web server software to surpass the 100 million web site milestone. Apache is developed and maintained by an open community of developers under the auspices of the Apache Software Foundation. Since April 1996 Apache has been the most popular HTTP server software in use. As of November 2010, Apache served over 59.36% of all websites and over 66.56% of the first one million busiest websites.

## **XAMPP**

XAMPP is a small and light Apache distribution containing the most common web development technologies in a single package. Its contents, small size, and portability make it the ideal tool for students developing and testing applications in PHP and MySQL. XAMPP is available as a free download in two specific packages: full and lite. While the full package download provides a wide array of development tools, XAMPP Lite contains the necessary technologies that meet the Ontario Skills Competition standards.

The light version is a small package containing Apache HTTP Server, PHP, MySQL, phpMyAdmin, OpenCL, and SQLite. Obtaining and Installing XAMPP As previously

mentioned, XAMPP is a free package available for download and use for various web development tasks.

All XAMPP packages and add-ons are distributed through the Apache Friends website at the address: <http://www.apachefriends.org/>. Once on the website, navigate and find the Windows version of XAMPP and download the self-extracting ZIP archive. After downloading the archive, run and extract its contents into the root path of a hard disk or USB drive. For example, the extract path for a local Windows installation would simply be C:\. If extracted properly we will notice a new xampp directory in the root of your installation disk. In order to test that everything has been installed correctly, first start the Apache HTTP Server by navigating to the xampp directory and clicking on the apache\_start.bat batch file. Next, we will test if the server is running correctly by opening an internet browser and typing <http://localhost/> into the address bar. If configured correctly, we will be presented with a screen similar to that of the one below.

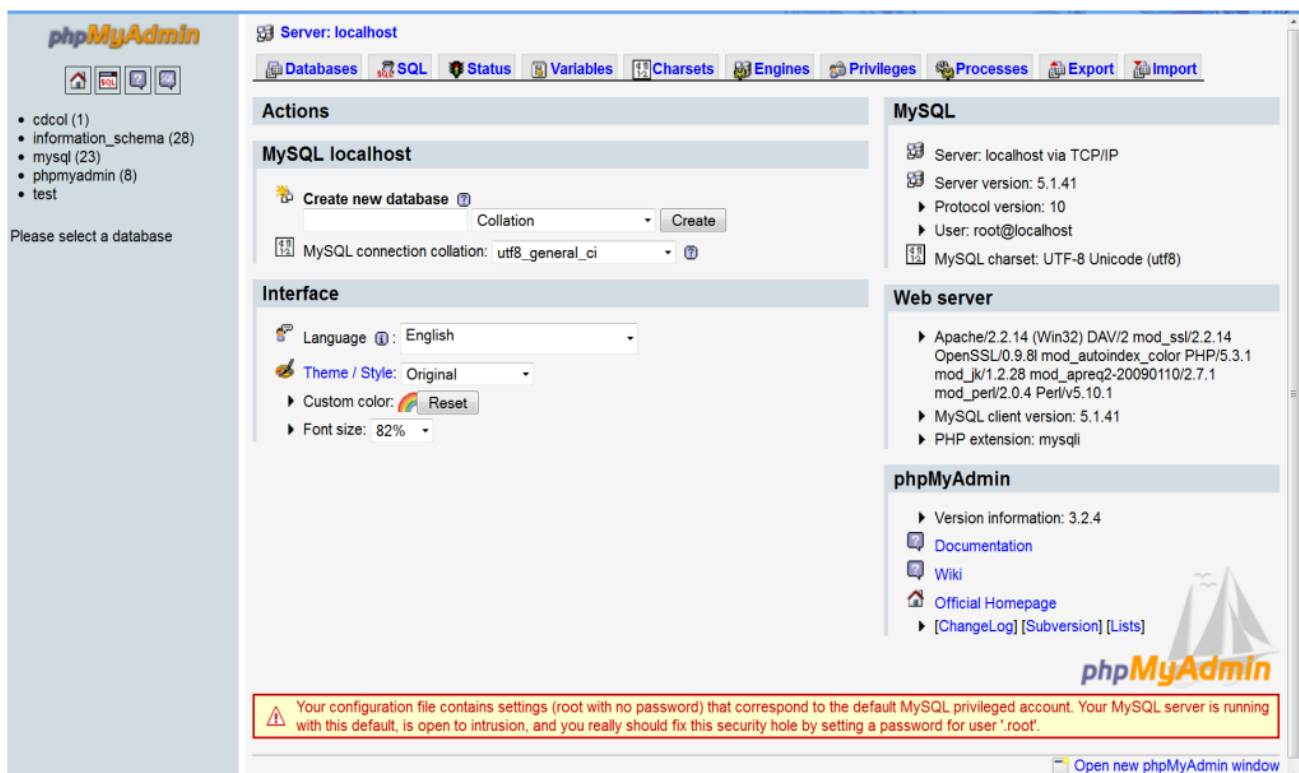

XAMPP splash screen.

In order to stop all Apache processes we do not close the running terminal application, but instead run another batch file in the xampplite directory called `apache_stop.bat`.

## Creating a Database and Inserting Data

Now that we have run and tested Apache and PHP, the next step is running MySQL and creating a database and table which will hold information to be used by our website. In order to start MySQL, navigate to the xampp directory and run the `mysql_start.bat` batch file. The XAMPP package contains an application called phpMyAdmin which allows developers to administer and maintain MySQL databases. We will be using phpMyAdmin to create a database and table, and enter test data. Before testing phpMyAdmin, make sure that both Apache and MySQL are running by opening their respective batch files: `apache_start.bat` and `mysql_start.bat`.

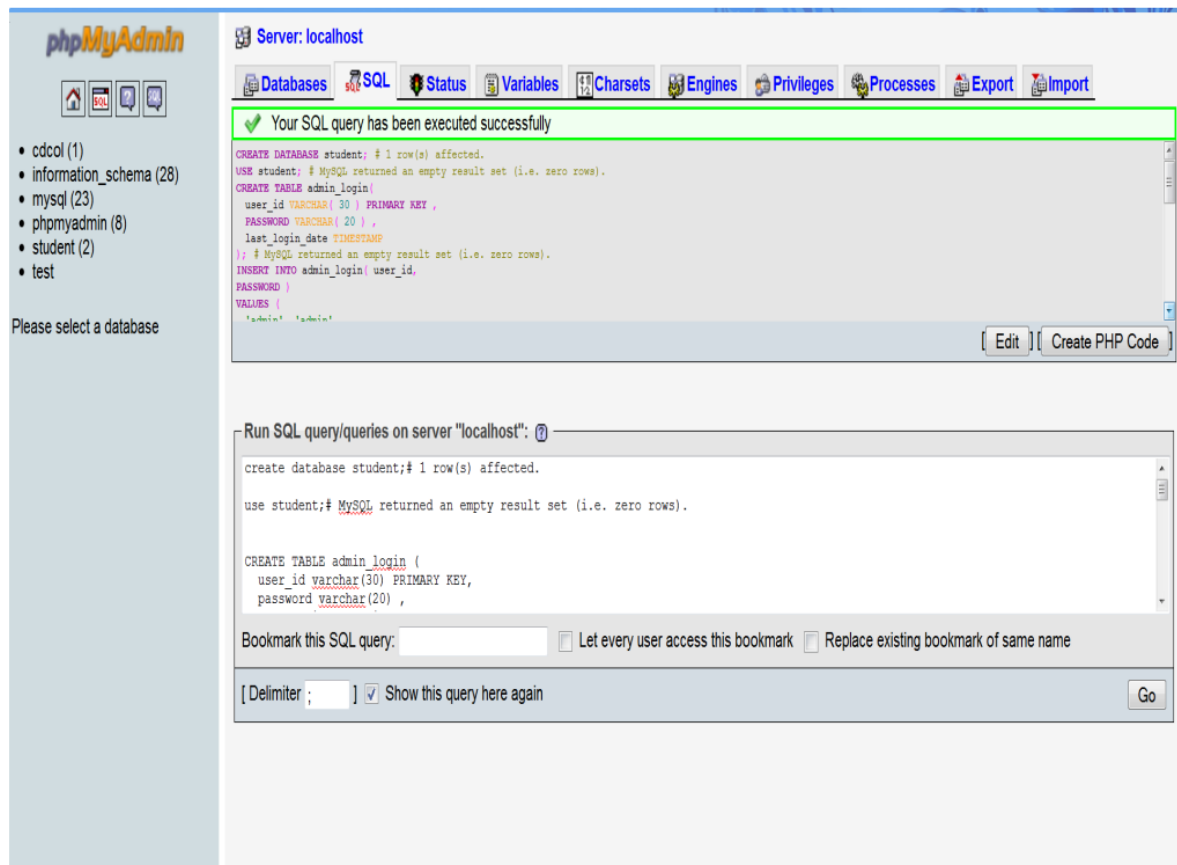

Along with Apache and MySQL running in the background, we type `http://localhost/phpMyAdmin/` into our web browser. If successful we will be presented with a phpMyAdmin start page similar to the one shown below.

phpMyAdmin start page The first step with phpMyAdmin running is creating a new database. We create a new database by directly executing SQL statements as shown below. The successful execution of the sql query creates a database 'student' with two tables in it.

The tables are admin\_login and student\_information. We also inserted values in the admin table. The screenshot below shows the successful execution of the query thus creation of a database named student.

Thus, we have learned to create a database in MYSQL by executing sql statements. After creating the database and tables we are now ready to use them in our website "Student Information Management System".

## Creation of database in mysql using phpMyAdmin

## 5. IMPLEMENTATION

### Scours Code

```

</div> <div class="modal-body">

<div class="agileits-w3layouts-info">

<p style="text-align:justify;">Government of India and the Ministry of Labor together have launched Modular Employable Skills (MES) under Skill Development Initiative (SDI). Under this scheme, school dropouts and existing workers, specially, in the unorganized sector are to be trained for employable skills. The scheme has been in operation since 2007 and statistics show that a large number of school dropouts do not have access to skill development for improving their employability through various vocational training and apprenticeship programs.The basic objective of the scheme is

to provide vocational training to school dropouts, ITI graduates, rural and unemployed youth to improve their employability. .</p>

<div class="agileits-w3layouts-info">

<p style="text-align:justify;">The main responsibility of this Ministry is to protect the interests of workers in general and also the rural and urban poor and that section of people who are deprived and sections of the society. The Government’s attention is also on the promotion of welfare and providing social security to the labor forces both in organized and unorganized sectors. The ministry majorly focuses on women and child welfare and has also started schemes to support various initiatives. The National Career Services is another scheme under the ministry of Labor and Employment which deals with providing job matching services to youth in an easy manner. This project also readily provides information on education, career opportunities, jobs etc.</p>

## 6. RESULTS WITH SCREENSHOTS

### Verifying admin email and password

### Validation Testing

A screenshot of a web application's "APPROVE SCHEMES" form. The form is titled "APPROVE SCHEMES" and has a sidebar with links: "sidbi", "Apply Schemes Report", "Contact Details Report", "Status", and "Logout". The form fields are: "Application Number" (with a sub-label "Application No"), "Applicant Name" (with a sub-label "Applicant Name"), "Email", "Date Of Approved" (with a value "18/02/07"), and "Status" (a dropdown menu). A validation error message "Please fill out this field." is shown next to the "Applicant Name" field. At the bottom of the form are "Submit" and "Clear" buttons.

## 7. CONCLUSION

Human development is a sustainable expansion of human capabilities and for this equal opportunities for all round development of both the sexes is essential. Women of this region though occupy much better position in comparing to other parts of the country but the development of rural women are not at the same footing. Assam comparatively in little higher position than other states of this region. But it is a matter of concern that a large number of rural women are still totally ignorant about the schemes and benefits of the schemes. The scheme KSY is supposed to cover maximum adolescent girls as the target of the Govt. is to cover one core adolescent girls each year. But a large number of adolescent girls are yet to include in the scheme.

Most of the people are unaware of the scheme. Thus, it is necessary to educate the people at the grass root level and circulate about the schemes among the people as many as possible. Fund should be utilized properly so that the purpose of the scheme be served. All policies relating to the development of women must reach up to the grass root level.

The gender discrimination can be reduced if each girl receives the benefit of KSY. It is a common factor that in our country many Govt. schemes do not reach to the needy people due to large scale corruption. So, it is necessary to root out corruption from the society for proper utilization of Govt. fund as well as sincere effort of officers to implement the schemes as per Govt. policies.

Steps need to be taken to increase the effectiveness of service delivery the Govt. of all the NE States need to address the issues for making sustainable path of development for their respective states and the region as a whole. For women development, the chief Minister of Assam proposed to reserve up to 20% of the Government supplies and contracts not exceeding Rs. 10 lacks for women. He also proposed to enhance the exemption limit to 2% for registration fees of land not exceeding Rs. 2 lacks for women. 50,000 single unemployed women will be provided assistance at the rate of Rs. 10,000/- each. Similarly, marriage assistance will be provided to BPL girls at the rate of Rs. 10,000/- each and cash assistance of Rs. 5,000/- each to one lack women self-help group has also been proposed. An amount of Rs. 1 crore has been provided to state's women commission as building grant. He also proposed to set up a woman welfare council to look after overall welfare of women.
